

AI for Bharat Hackathon

Powered by **aws**

Team Name : InnovateX

Team Leader Name : Mansi Upadhyay

Problem Statement : Build an AI-powered solution that helps people learn faster, work smarter, or become more productive while building or understanding technology.

Brief about the Idea:

The idea is to build an AI-powered learning assistant that helps students and

beginners understand technical and non-technical concepts easily.

The system explains complex topics in simple, step-by-step language so that

learners can understand faster and study more effectively.

- Unlike traditional learning platforms that provide fixed and complex content,
- this solution uses AI to generate personalized and simplified explanations
- based on the learner's query.

- The AI adapts explanations to the user's level, making learning faster and
- more effective.

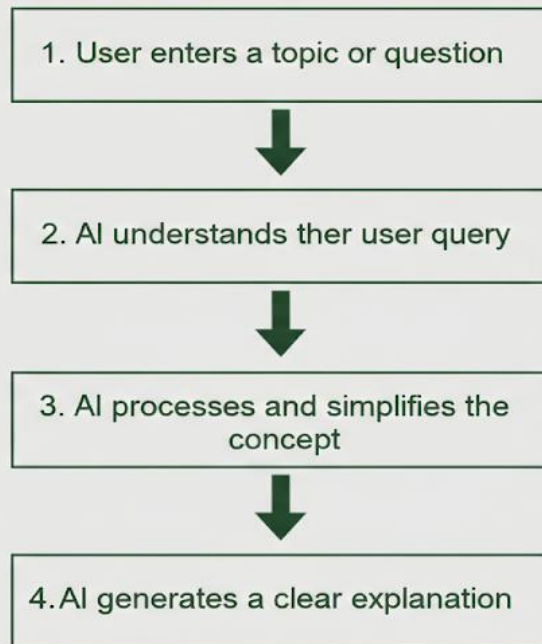

- USP: Simple, personalized, step-by-step explanations powered by AI.

List of features offered by the solution

- AI-powered learning assistant
- Simple explanation of complex concepts
- Step-by-step learning approach
- Concept summarization
- Beginner-friendly responses

Proposed System Architecture for AI Education Tool

Architecture Diagram

Technologies to be used in the solution:

- AI Language Model
- Web or Mobile Interface
- Cloud Platform (AWS)

Add as per the requirements for the hackathon:

The solution demonstrates meaningful use of AI by adapting explanations to different learners. AI is required to understand user intent and generate personalized responses. The system is responsibly designed for educational use.
